

May 19, 2026

To whom it may concern,

I am pleased to recommend **ZHAO Xuecen**, Student ID **22014303d**.

I had the opportunity to observe Xuecen's work through his ME42011 car spoiler project. His project focused on the design and development of an active rear spoiler mechanism, and I found the final outcome to be highly innovative and generally impressive. The project demonstrated his understanding of mechanical structure, linkage design, control implementation, simulation, and practical prototyping.

What stood out most was that Xuecen went beyond the basic task requirement. Although the original requirement mainly focused on studying the structure of the mechanism, he further developed the project by adding additional work, including fluid simulation in ANSYS and the construction of a functioning physical model. This showed his willingness to explore more possibilities, improve the quality and presentation of the product, and connect theoretical study with practical engineering application. Throughout the project, Xuecen demonstrated strong problem-solving ability. He was able to identify design and control issues, refine the mechanism, adjust the servo-driven spoiler motion, and improve the final model through testing and iteration. His work shows that he has the practical mindset and technical capability to handle a wide range of engineering tasks. Eventually, he is the only student received the full mark for the course project in the class.

His work also reflects a clear interest in robotics, automation, and intelligent electromechanical systems. The project required him to integrate mechanical structure, actuation, control logic, simulation results, and a working prototype, which aligns well with the broader skills needed in robotics-related engineering work.

Based on his performance, I believe Xuecen is a capable, motivated, and creative engineering

student. I am confident that he will continue to develop his skills and contribute positively to future academic, technical, or professional projects.

Yours Sincerely,

Prof. Dan Zhang  
Chair Professor of Intelligent Robotics and Automation  
Director of PolyU-Nanjing Technology and Innovation Research Institute  
Director of Consortium for Intelligent Robotics Research  
The Hong Kong Polytechnic University
